

# HOW TO MEASURE A BOX

Box measurements always correspond to the inner dimensions of the box. This is done to ensure a snug and protective fit around your product. Simply measure the length, width, and depth (or height) of what you would like to pack and express the measurements in inches.

Make sure to give the dimensions in this order:

**1 Length**   **2 Width**   **3 Depth**

Add a minimum of 3mm extra to each dimension for the filtering. Be sure that the length and width correspond to the opening of the box.
