Read these instructions before using the machine.
OVERVIEW

The Chariot® iVacuum 24™ is a battery powered, stand-on, wide area vacuum intended for commercial use. The Chariot® iVacuum 24™ brushes and vacuums debris from indoor hard and carpeted surfaces and deposits the debris in the debris tray and filter bags.

The unit also has an accessory wand and hose for cleaning small areas and non-floor surfaces.

Warranty Registration

Thank you for purchasing a Windsor product. Warranty registration is quick and easy. Your registration will allow us to serve you better over the lifetime of the product.

To register your product go to:
www.windsorind.com/WarrantyRegistration.aspx

How To Use This Manual

This manual contains the following sections:

- How to Use This Manual
- Safety
- Operations
- Maintenance
- Parts List

The HOW TO USE THIS MANUAL section will tell you how to find important information for ordering correct repair parts.

Parts may be ordered from authorized dealers. When placing an order for parts, the machine model and machine serial number are important. Refer to the MACHINE DATA box which is filled out during the installation of your machine. The MACHINE DATA box is located on the inside of the front cover of this manual.

The SAFETY section contains important information regarding hazardous or unsafe practices of the machine. Levels of hazards are identified that could result in product damage, personal injury, or severe injury resulting in death.

The OPERATIONS section is to familiarize the operator with the operation and function of the machine.

The MAINTENANCE section contains preventive maintenance to keep the machine and its components in good working condition. They are listed in this general order:

- Batteries
- Brush Deck
- Drive Motor
- Service Schedule
- Machine Troubleshooting

The PARTS LIST section contains assembled parts illustrations and corresponding parts list. The parts lists include a number of columns of information:

- REF – column refers to the reference number on the parts illustration.
- PART NO. – column lists the part number for the part.
- PRV NO. – reference number.
- QTY – column lists the quantity of the part used in that area of the machine.
- DESCRIPTION – column is a brief description of the part.
- SERIAL NO. FROM – If this column has an (*) and a Reference number, see the SERIAL NUMBERS page in the back of your manual. If column has two asterisk (**), call manufacturer for serial number. The serial number indicates the first machine the part number is applicable to. The main illustration shows the most current design of the machine. When a boxed illustration is shown, it displays the older design.
- NOTES – column for information not noted by the other columns.

NOTE: If a service or option kit is installed on your machine, be sure to keep the KIT INSTRUCTIONS which came with the kit. It contains replacement parts numbers needed for ordering future parts.

NOTE: The manual part number is located on the lower left corner of the front cover.
IMPORTANT SAFETY INSTRUCTIONS

When using this machine, basic precaution must always be followed, including the following:

READ ALL INSTRUCTIONS BEFORE USING THIS MACHINE.

⚠ WARNING: To reduce the risk of fire, electric shock, or injury:

Use only indoors. Do not use outdoors or expose to rain. This appliance is for dry use only.

Use only as described in this manual. Use only manufacturer’s recommended components and attachments.

If the machine is not working properly, has been dropped, damaged, left outdoors, or dropped into water, return it to an authorized service center.

Do not operate the machine with any openings blocked. Keep openings free of debris that may reduce airflow.

This machine is not suitable for picking up hazardous dust.

Machine can cause a fire when operating near flammable vapors or materials. Do not operate this machine near flammable fluids, dust or vapors.

This machine is suitable for commercial use, for example in hotels, schools, hospitals, factories, shops and offices for more than normal housekeeping purposes.

Maintenance and repairs must be done by qualified personnel.

Disconnect battery before cleaning or servicing.

Before the machine is discarded, the batteries must be removed and properly disposed of.

Make sure all warning and caution labels are legible and properly attached to the machine.

During operation, attention shall be paid to other persons, especially children.

Before use all covers and doors shall be put in the positions specified in the instructions.

When leaving unattended, secure against unintentional movement.

The machine shall only be operated by instructed and authorized persons.

When leaving unattended, switch off or lock the main power switch to prevent unauthorized use.

This appliance has been designed for use with the brushes specified by the manufacturer. The fitting of other brushes may affect its safety.

Do not use on surfaces having a gradient of over 10% (6 degrees).

SAVE THESE INSTRUCTIONS
MESURES DE SÉCURITÉ IMPORTANTES

Lors de l'utilisation d'un appareil à batteries, il est nécessaire de respecter systématiquement des mesures de sécurité de base, comme suit :

**AVERTISSEMENT:**

NOTE DE TOUTES CES MESURES AVANT D'UTILISER CETTE MACHINE.

Pour réduire les risques d'incendie, de chocs électriques, ou de blessures :

- N'utiliser cette machine qu'en intérieur. Ne jamais l'utiliser à l'extérieur ou dans la pluie.
- N'utiliser cette machine que comme décrit dans le présent manuel. N'utiliser que les composants et les accessoires conseillés par le fabricant.
- Lorsque la machine ne fonctionnant pas correctement, a fait l'objet d'une chute ou d'une détérioration, a été laissée à l'extérieur, est tombée dans l'eau, la retourner au centre de service agréé.
- Ne pas opérer la machine lorsque les conduits de ventilation sont bloquées. Débarrasser les débris des conduits, car ils peuvent réduire l'écoulement d'air.
- Cette machine n'est pas adaptée au ramassage de poussières dangereuses.
- Cette machine peut provoquer un incendie lorsqu'elle est utilisée près de vapeurs ou de matériaux inflammables.
- Ne pas l'utiliser près de liquides, de poussières ou de vapeurs inflammables.
- Cette machine est destinée à un usage commercial. Elle est recommandée davantage pour les domaines hôtelier, scolaire, hospitalier, industriel ou pour les bureaux, les chaînes de magasin, que pour un usage domestique normal.
- L'entretien et les réparations de la machine doivent être effectuées par un personnel qualifié.
- Si de la mousse ou du liquide sort de la machine, la mettre hors tension immédiatement.
- Déconnecter les batteries avant de nettoyer la machine ou de la soumettre à un entretien.
- Avant de se débarrasser de la machine, il est nécessaire de retirer les batteries et de les jeter correctement.
- S'assurer que toutes les plaques d'avertissement ou de précaution sont lisibles et fixées correctement sur la machine.
- Durant la manœuvre de la machine, prendre garde aux personnes environnantes et notamment aux enfants.
- Avant l'utilisation de la machine, veiller à positionner tous les couvercles et portes comme indiqué dans les instructions.
- Lorsque la machine est laissée sans surveillance, s'assurer qu'elle ne se déplace pas de manière accidentelle.
- Cette machine ne doit être manœuvrée que par un personnel expérimenté et qualifié.
- Lorsque la machine est laissée sans surveillance, la mettre hors tension ou verrouiller l'interrupteur principal afin d'empêcher un emploi non autorisé.
- Seuls les produits chimiques recommandés par le fabricant doivent être utilisés.
- Cette machine a été conçue pour être utilisée avec des brosses spécifiées par le fabricant.
- L'utilisation d'autres brosses peut affecter sa sûreté.
- N'employez pas sur des surfaces ayant un gradient de plus de 10% (6 degrés).

CONSERVER CES INSTRUCTIONS
The following symbols are used throughout this guide as indicated in their descriptions:

**HAZARD INTENSITY LEVEL**

There are three levels of hazard intensity identified by signal words - **WARNING** and **CAUTION** and **FOR SAFETY**. The level of hazard intensity is determined by the following definitions:

- **WARNING**: Hazards or unsafe practices which COULD result in severe personal injury or death.

- **CAUTION**: Hazards or unsafe practices which could result in minor personal injury or product or property damage.

- **FOR SAFETY**: To identify actions which must be followed for safe operation of equipment.

**FOR SAFETY**: Report machine damage or faulty operation immediately. Do not use the machine if it is not in proper operating condition. Following is information that signals some potentially dangerous conditions to the operator or the equipment. Read this information carefully. Know when these conditions can exist. Locate all safety devices on the machine. Please take the necessary steps to train the machine operating personnel.

**FOR SAFETY**:

- **DO NOT OPERATE MACHINE**:
  - Unless Trained and Authorized.
  - Unless Operation Guide is Read and understood.
  - In Flammable or Explosive areas.
  - In areas with possible falling objects.

**WHEN SERVICING MACHINE**:

- Avoid moving parts. Do not wear loose clothing; jackets, shirts, or sleeves when working on the machine. Use Windsor approved replacement parts.

- **WARNING**: Batteries emit hydrogen gas. Explosion or fire can result. Keep sparks and open flame away. Keep battery compartment open during charging. Keep sparks and flames away from the batteries. Do not smoke around batteries.

- **WARNING**: Disconnect batteries before working on machine. Only qualified personnel should work inside machine. Always wear eye protection and protective clothing when working on or near batteries. Avoid skin contact with the acid contained in the batteries.

- **WARNING**: Never allow metal to lie across battery tops.
Safety

Les symboles ci-dessous sont utilisés à travers ce manuel comme illustré dans leurs descriptions :

DEGRÉS DE RISQUES EN CAS DE DANGER

Il existe trois degrés de risques identifiés par les termes signalétiques -AVERTISSEMENT et ATTENTION et POUR VOTRE SÉCURITÉ. Le degré de risque est défini de la manière suivante:

⚠️ AVERTISSEMENT:

AVERTISSEMENT - Dangers ou méthodes dangereuses qui POURRAIENT provoquer de graves blessures ou entraîner la mort.

⚠️ ATTENTION:

ATTENTION - Dangers ou méthodes dangereuses qui pourraient provoquer des blessures légères ou une détérioration du produit ou des biens immobiliers.

POUR VOTRE SÉCURITÉ: ce signe permet d'identifier les mesures de précaution à prendre pour assurer un bon fonctionnement du matériel.

Rendre compte immédiatement d'une défaillance ou d’une détérioration de la machine. Ne pas utiliser la machine si celle-ci ne fonctionne pas correctement. Lire soigneusement les informations ci-dessous signalant certains dangers potentiels pour l'opérateur de la machine. L'opérateur doit être absolument au courant de ces dangers potentiels. Localiser tous les dispositifs de sécurité sur la machine. Il est conseillé de prendre les mesures nécessaires pour former le personnel opérateur.

POUR VOTRE SÉCURITÉ:

NE PAS MANOEUVRER LA MACHINE:
Lorsqu'on n'est pas expérimenté ou qualifié.
Lorsque le guide d'utilisation n'est pas été lu ou compris.
Dans des zones inflammables ou explosives.
Dans des zones où des objets peuvent tomber.

LORS DE L’ENTRETIEN DE LA MACHINE:
Éviter les parties amovibles. Ne pas porter de vêtements amples, tels que des vestes, des chemises ou des vêtements avec manches lors de l'utilisation de la machine. Utiliser les pièces détachées Windsor homologuées.

⚠️ AVERTISSEMENT:

Les batteries émettent le gaz d’hydrogène. L'explosion ou le feu peut résulter. Étincelles de subsistance et flamme nue loin. Compartiment de batterie de subsistance ouvert en chargeant. Étincelles et flammes de subsistance loin des batteries. Ne fumez pas autour des batteries.

⚠️ AVERTISSEMENT:

Déconnecter les batteries avant de travailler sur la machine. La machine ne doit être confiée qu’à un personnel qualifié. Porter systématiquement des lunettes et des vêtements de protection lors d’une intervention sur les batteries ou aux alentours. Éviter tout contact de la peau avec l’acide contenu dans les batteries.

⚠️ AVERTISSEMENT:

Ne jamais placer d’objets métalliques sur le dessus des batteries.
Safety Label Locations

These drawings indicate the location of safety labels on the machine. If at any time the labels become illegible, promptly replace them.

EMPLACEMENT DE L’ÉTIQUETTE DE SÉCURITÉ

REMARQUE : Ces dessins indiquent l'emplacement des étiquettes de sécurité sur la machine. Si, à tout moment, les étiquettes deviennent illisibles, contactez votre représentant autorisé pour un remplacement rapide.

CAUTION:
This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.

AVERTISSEMENT:
Cet appareil n’est pas prévu à l’usage des personnes (enfants y compris) avec des possibilités physiques, sensorielles ou mentales réduites, ou le manque d’expérience et de connaissance, à moins qu’ils aient été donnés la surveillance ou l’instruction au sujet de l’utilisation de l’appareil par une personne chargée de leur sûreté. Des enfants devraient être dirigés pour s’assurer qu’ils ne jouent pas avec l’appareil.
How This Machine Works

The Chariot® iVacuum 24 ATV™ is a battery powered, self-propelled, vacuum intended for commercial use. The appliance vacuums debris and dirt from the carpet and collects it in a disposable bag.

The machine’s primary systems are the brush system, vacuum system, and operator control system.

The function of the brush system is to brush the carpet. The brush system consists of two cylindrical type brushes, side brush, motors, brush deck, and controls. The right side brush is used to sweep debris from along edges into the path of the brush deck. The front cylindrical brush sweeps debris backwards. The rear brush sweeps debris forwards. Both cylindrical brushes work to agitate the carpet and to route the debris up into the debris tray assembly.

The function of the vacuum system is to vacuum fine dirt and debris into the vacuum bag. The recovery system consists of the debris tray assembly, vacuum motor, paper vacuum bag and post filter. The vacuum draws the dirt off the floor as the machine moves forward. The vacuum motor provides suction to draw the fine dirt into the vacuum bag, and the debris tray holds large debris. The vacuum bag holds the fine dirt.

The function of the operator control system is to control the direction and speed of the machine. The directional control system consists of the direction control switch, throttle pedal, speed control switch, drive reset switch, emergency stop/brake switch, steering wheel, propel controller and drive wheel. The directional control switch signals forward or reverse direction. The controller interprets signals from the throttle pedal to command the drive wheel to propel or slow the machine. The drive reset switch is to make sure the operator is on platform before machine will propel. The steering wheel points the drive wheel in the direction desired by the operator. The parking brake automatically engages when the operator steps off the platform. The emergency stop/brake can be used to hold the machine on slopes.

2. 9
3. 7
4. 6
5. 4
6. 3
7. 2
8. 1
9. 10
1. **Key Switch**
   Controls the power for machine functions.
   To turn the machine power on, rotate key clockwise.
   To turn the machine off, rotate key counterclockwise.
   When the key is turned on the battery discharge indicator light will flash once and stay on continuously.

2. **Emergency Stop/Brake Switch**
   This safety feature is designed to cut all power to the machine at any time and apply parking brake.
   To shut the machine power off, push the Emergency Stop Switch, this will also engage the parking brake and cause the machine to stop immediately.
   To reset the machine, rotate the switch clockwise. The switch will pop-up indicating reset machine.

3. **Directional Control / Drive Reset Switch**
   This safety feature is designed to ensure safe engagement of propel drive. Each time the machine power is turned on, or each time an operator steps on to the platform, the Drive Reset Switch must be pushed before machine will propel.
   The switch controls the direction of travel of the vehicle. The lighted arrow on the switch indicates direction of travel.
   To travel forward, press the top of the switch.
   To travel in reverse, press the bottom of the switch.
4. **THROTTLE PEDAL**
   Controls the speed of the vehicle within the speed control setting selected. Pressing the pedal causes the machine to travel in the direction selected by the Directional Control Switch.
   To increase speed, increase pressure on the pedal.
   To decrease speed, decrease pressure on the pedal.

5. **HORN BUTTON**
   The horn is activated by pressing the horn button.

6. **STEERING WHEEL**
   The steering wheel turns the front wheel causing the machine to change direction.

7. **SPEED CONTROL**
   Controls the maximum speed of the machine. There are two travel-only settings, slow and fast.
   To change speed, rotate the dial to either slow or fast position. The slow position is to the left (counterclockwise), fast to the right (top position).
   The throttle pedal will always regulate the speed between 0 and maximum.
8. **BATTERY DISCHARGE INDICATOR**

Indicates the charge level of the batteries. The indicator will be illuminated if the batteries have a sufficient charge. A slow, continuous flash indicates the batteries require charging.

The Battery Lockout function will activate when the batteries are low. Once active, the LED status indicator will begin to flash slowly and the controller will inhibit the side broom, main brushes, and vacuum operation. The drive remains functional. Return the unit to the charging station and charge the batteries.

**NOTE:** *Continuing usage may damage the batteries.*

When the machine is left overnight with less than a full charge, the display may initially indicate a full charge. It will also indicate a full charge if the batteries are disconnected, then reconnected. After a few minutes of operation the indicator will give the correct charge level.

9. **HOUR METER**

Records the number of hours the machine has been in vacuum operation. This information is useful in determining when to service the machine.
1. **Function Mode Switch**

The first two positions are for transport only. See drive controls section.

**A1 - Light vacuuming**

This mode is used for light vacuuming. In this mode the machine will propel at fast speed. The ‘floating’ brush deck is in the down position. The brushes will agitate, the side broom will bring debris into the path of the deck. The vacuum will draw the dirt and debris into the debris tray and the vacuum bag.

**A2 - Deep vacuuming**

This mode is used for deep vacuuming. In this mode the machine will propel at a slow speed. The ‘floating’ brush deck is in the down position. The brushes will agitate, the side broom will bring debris into the path of the deck. The vacuum will draw the dirt and debris into the debris tray and the vacuum bag.

**B1 - Accessory mode**

This mode is used for using the accessory hose and attachments only. The brush and vacuum deck will both be up and off. In this mode the machine will not propel.

2. **Vacuum Bag Status Light**

Light is green when bag is in place and vacuum operating conditions are good. Light is red if bag is missing or full or vacuum operating conditions are poor.
Pre-run Machine Inspection
Do a pre-run inspection to find possible problems that could cause poor performance or lost time from breakdown. Follow the same procedure each time to avoid missing steps.

NOTE: See Maintenance Service Schedule for pre-run machine inspection checklist items.

Starting Machine
NOTE: Perform pre-run machine check before operating machine.

FOR SAFETY: Before starting machine, make sure that all safety devices are in place and operating properly.

1. Push machine while off to verify parking brake is functioning correctly.
2. Stand on the operator platform. Throttle pedal must be in neutral position.
3. Turn the machine power on by turning key switch clockwise to the “ON” position.
4. Check the position of the Directional Control Switch to make sure the machine will travel in the direction intended.
5. Press the Drive Reset Switch.
6. Press lightly on the throttle pedal with right foot.

Emergency Stop Procedures
1. Release the throttle pedal by lifting right foot.
2. Turn machine power off with key switch by turning key switch counterclockwise.
3. If an electrical problem is suspected, push in emergency stop button. This will also engage the parking brake and cause the machine to stop immediately.
Operations

Normal Vacuuming

Plan the vacuuming pattern in advance. The longest track is around the perimeter of the area to be cleaned. For efficient operation, the runs should be the longest possible without turning or stopping.

In order to achieve the best possible results, the area which is to be cleaned should be picked up before vacuuming. Large debris, strings and wire must be removed to prevent being caught in brushes.

*NOTE: Check and empty debris tray as needed during operation.*

If machine is allowed to stand in neutral with the vacuum deck down for more than 2 seconds, the brush motor stops. If either forward or reverse travel is selected, the brush motor will continue once movement of machine begins. Overlap the brush path and avoid transporting over previously cleaned areas.

To Begin Vacuuming

⚠️ **CAUTION:**

When operating the machine around people, pay close attention for unexpected movement. Use extra caution around children.

⚠️ **ATTENTION:**

Lorsque vous utilisez la machine en présence de gens, portez une attention particulière aux mouvements inattendus. Soyez plus prudent, surtout en présence d’enfants.

1. Stand on the operator platform. Throttle pedal must not be depressed.
2. Turn key switch to turn machine power on.
3. Check position of Directional Control Switch to ensure that machine is set to travel in direction intended.
4. Rotate the Speed/Function Control Knob to one of the two vacuum settings.
5. Drive machine forward to begin vacuuming.
6. Adjust the speed of the machine as necessary.
To Stop Vacuuming

1. Remove foot from throttle pedal allowing pedal to return to neutral.
2. Turn machine power off or switch to transport only mode.

*FOR SAFETY: Before leaving or servicing machine: stop on level surface, turn off machine and remove key.*

*FOR SAFETY: When using machine, go slow on inclines.*

Changing Vacuum Bag

A convenient bag storage is built into side of machine.

1. Park machine on level area.
2. Turn the machine power off.
3. Unlatch and open top of machine.
4. Remove backing from vacuum bag’s sealing tag. Seal top of bag.
5. Remove full vacuum bag from vacuum bag housing.
6. Clean vacuum bag housing and remove any debris.

7. Tilt back panel to retrieve a new clean paper bag from the storage compartment in left side wall of main cover.
8. Return back panel to operating position.
9. Unfold bag. There is a notch in cardboard on top of bag. Align notch with housing front edge aligning tab. Slightly bow cardboard to slide under housing’s front and rear retaining tabs.
10. Close and latch machine top.

Batteries

1. Cover Retainer Latch
2. Rear Cover
3. Battery Connector-Machine
4. Batteries
5. Battery Tray
**Batteries (Wet Cell)**

The batteries provide the power to operate the machine. The batteries require regular maintenance to keep them operating at peak efficiency.

The machine batteries will hold their charge for long periods of time, but they can only be charged a certain number of times. To get the greatest life from the batteries, charge them when their charge level reaches 25% of a full charge. Use a hydrometer to check the charge level.

Do not allow the batteries to remain in a discharged condition for any length of time. Never expose a discharged battery to temperatures below freezing. Discharged batteries will freeze causing cracked cases. Do not operate the machine if the batteries are in poor condition or if they have a charge level below 25% (specific gravity below 1.155).

Keep all metallic objects off the top of the batteries, as they may cause a short circuit. Replace worn or damaged cables and terminals.

Check the electrolyte level in each battery cell before and after charging the batteries. Never add acid to the batteries, use distilled water. Do not allow water level to fall below the battery plates. Portions of plates exposed to air will be destroyed. Do not overfill. Keep plugs firmly in place at all times.

---

**WARNING:**

Not all batteries require maintenance. AGM batteries are maintenance free. Do not attempt to remove sealed caps from AGM batteries. Warranty is void if caps are removed from AGM battery.

---

**AVERTISSEMENT:**

L'entretien n'est pas nécessaire pour toutes les batteries. Les batteries AGM ne nécessitent pas d'entretien. N'essayez pas d'enlever les bouchons scellés des batteries AGM. La garantie est annulée si les bouchons sont retirés des batteries AGM.
CAUTION:
When servicing machine, avoid contact with battery acid.

ATTENTION:
Lors de l'entretien de la machine, évitez tout contact avec l'acide de batterie.

WARNING:
Batteries emit hydrogen gas. Explosion or fire can result. Keep sparks and open flame away. Keep covers open when charging.

AVERTISSEMENT:

WARNING:
Wear eye protection and protective clothing when working with batteries.

AVERTISSEMENT:
Portez des lunettes de protection et des vêtements de protection lorsque vous travaillez avec des batteries.

WARNING:
Charge batteries in a well ventilated area.

AVERTISSEMENT:
Chargez les batteries dans un endroit bien ventilé

Battery Maintenance
1. When cleaning the batteries, use a solution of baking soda and water. Do not allow the cleaning fluid to enter the battery cells, electrolyte will be neutralized.

2. Maintain the proper electrolyte level in each battery cell. If a cell should accidentally overflow, clean immediately.

3. Wipe off the top of the batteries at least once a week.

4. Test battery condition with a hydrometer at least once a week.

5. Ensure that all connections are tight and all corrosion removed.

6. Every 4 to 6 months, remove the batteries from the machine and clean the battery cases and battery compartment.
Checking Battery Specific Gravity

Use a hydrometer to check the battery specific gravity.

CHECKING GRAVITY

a. Hydrometer Battery
b. Battery

NOTE: Do not take readings immediately after adding distilled water, if the water and acid are not thoroughly mixed, the reading may not be accurate.

Check the hydrometer readings against this chart.

<table>
<thead>
<tr>
<th>SPECIFIC GRAVITY @ 80°F (27°C)</th>
<th>BATTERY CONDITION</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.265</td>
<td>100% CHARGED</td>
</tr>
<tr>
<td>1.225</td>
<td>75% CHARGED</td>
</tr>
<tr>
<td>1.190</td>
<td>50% CHARGED</td>
</tr>
<tr>
<td>1.155</td>
<td>25% CHARGED</td>
</tr>
<tr>
<td>1.120</td>
<td>DISCHARGED</td>
</tr>
</tbody>
</table>

NOTE: If the readings are taken when the battery electrolyte is any temperature other than 80°F (27°C), the reading must be temperature corrected.

To find the corrected specific gravity reading when the temperature of the battery electrolyte is other than 80°F (27°C): Add (+) to the specific gravity reading 0.004 (4 points), for each 10°F (6°C) above 80°F (27°C). Subtract (-) from the specific reading 0.004 (4 points), for each 10°F (6°C) below 80°F (27°C).
Charging Batteries

⚠️ CAUTION:
When servicing machine, avoid contact with battery acid.

⚠️ ATTENTION:
Lors de l'entretien de la machine, évitez tout contact avec l'acide de batterie.

⚠️ WARNING:
Batteries emit hydrogen gas. Explosion or fire can result. Keep sparks and open flame away. Keep covers open when charging.

⚠️ AVERTISSEMENT:

⚠️ WARNING:
Wear eye protection and protective clothing when working with batteries.

⚠️ AVERTISSEMENT:
Portez des lunettes de protection et des vêtements de protection lorsque vous travaillez avec des batteries.

⚠️ WARNING:
Charge batteries in a well ventilated area.

⚠️ AVERTISSEMENT:
Chargez les batteries dans un endroit bien ventilé

Use a 36 volt, 20 amp maximum output DC charger which will automatically shut off when the batteries are fully charged.

1. Stop the machine in a clean, well ventilated area next to the charger.

2. Turn “OFF” machine.

   FOR SAFETY: Before leaving or servicing machine; stop on level surface, turn off machine and remove key.

3. Remove rear cover, unplug batteries from machine.

4. Check the electrolyte level in each battery cell. Before charging, add just enough distilled water to cover the plates. After charging is complete, add just enough distilled water to bring up the level to the indicator ring. If the water level is too high before charging, normal expansion rate of the electrolyte may cause an overflow resulting in a loss of battery acid balance and damage the machine.
5. Replace the battery caps, and leave them in place while charging.

6. Unplug the battery connector from the machine.

**FOR SAFETY:** When charging, connect the charger to the batteries before connecting the charger to the AC wall outlet. Never connect the charger to the AC wall outlet first. Hazardous sparks may result.

7. Plug the charger connector into the battery connector. Connect the charger AC plug to a wall outlet. The charger gauge should indicate that the batteries are charging.

8. When the batteries are fully charged, disconnect the charger from the AC wall outlet, then disconnect the charger from the batteries.

9. Connect the batteries to the machine connector.

10. Check the electrolyte level. It should be up to the indicator ring. If necessary, add distilled water.

11. Install the rear cover.

**Changing Batteries**

1. Stop the machine in a clean area next to the charger. Turn off machine.

**FOR SAFETY:** Before leaving or servicing the machine; stop on level surface, turn off machine and remove key.

2. Open the console cover.

3. Tilt the rear cover back. The rear cover can also be removed for better access.

4. If equipped with optional on board charger, tilt charger mount to rear of machine.

5. Disconnect battery pack from machine.

6. Use the proper size open end wrench to disconnect main ground wire first and secure cable terminal away from batteries.

7. Disconnect main positive lead and secure cable terminals away from batteries.

8. Loosen both terminals on each jumper cable and remove one at a time.

9. Prepare a suitable site to place the batteries.

**WARNING:**

Attach suitable battery lifting device and lift batteries from the machine. Batteries are a potential environmental hazard. Consult your battery supplier for safe disposal methods.

**AVERTISSEMENT:**

Fixez le dispositif de levage de batterie approprié et levez les batteries de la machine. Les batteries constituent un danger potentiel pour l'environnement. Consultez le fournisseur de votre batterie pour connaître les méthodes d'élaboration sûres.
**Battery Charger Programming**

*NOTE:* For machines equipped with optional on-board charger. When replacing batteries, charger programming changes may be required. If replacing batteries with same type, (e.g. maintenance free batteries with maintenance free) no programming is required. When batteries with different type (e.g. maintenance free with wet cell), programming changes are required. Failure to make programming changes may lead to reduced battery life.

**Switching From Wet Cell to Maintenance Free Batteries**

Program charger from normal mode (red LED flashes) to alternate mode (Red and green LED’s flash):

1. Disconnect battery charger from outlet.
2. Connect (+) wire from EZlamp to (+) charger battery cable.
3. Connect AC cord to outlet. All LED’s should be on.
   
   *NOTE: If red and green LED’s do not flash, repeat steps 1 and 2.*
4. Wait 5 seconds, disconnect wires and unplug charger.
5. Programming is complete.

**Switching From Maintenance Free to Wet Cell Batteries**

Program charger from alternate mode (Red and green LED’s flash) to normal mode (red LED flashes):

1. Disconnect battery charger from outlet.
2. Connect (+) wire from EZlamp to (+) charger battery cable.
3. Connect AC cord to outlet. Red LED should be on.
   
   *NOTE: If Red LED light does not flash, repeat steps 1 and 2.*
4. Wait 5 seconds, disconnect wires and unplug charger.
5. Programming is complete.

*NOTE: Battery Charger must be approved to 60335-2-29 standard.*
Circuit Protection

Circuit breakers interrupt the flow of power in the event of an electrical overload. When a circuit breaker is tripped, reset it by pressing the exposed button. If a circuit breaker continues to trip, the cause of the electrical overload should be found and corrected.

- **1.5 Amp.** Protects the deck actuator.

- **18 Amp.** Protects the brush motor, 3 Amp fuse protects the side broom motor.

- **18 Amp.** Protects the vacuum motor.
Vacuum Diverter Valve Maintenance

For maintenance and removal of the vacuum diverter valve follow the steps below.

1. Remove hoses from diverter valve.
2. Remove screw and washer (1) on right side of hinge bracket.
3. Loosen screw on left side to allow tank to rotate to the left (do not remove screw). This will allow better access for valve removal.

   NOTE: Remove the post filter for easier access.

4. Remove the three (3) screws and washers retaining the diverter valve assembly to the console.
5. Gently pull valve assembly from console to avoid damaging valve.
6. Reverse steps to re-install.
Brush Deck
1. Debris Tray
2. Brush Deck Door
3. Side Broom
4. Deck Lift Actuator
**Maintenance**

**Brush Deck**

The dual cylindrical head is designed to agitate the carpet while vacuuming. The first brush pushes debris backwards. The second brush, brushing forward picks up debris and throws it into the debris tray.

*NOTE: The brushes should wear evenly side to side. Brushes should be replaced as a set when bristle length wears to height of yellow PerformAlert™ bristles.*

**Brush Removal**

The brushes are removed from the right side of the machine.

1. Release door spring clips and raise the brush door.
2. Slide the brushes out the side opening. Remove bearing cap. Clean bearings and cap.

**Brush Installation**

1. Slide brush through door opening and onto drive shaft. Make sure it is fully seated and is driven by the deck system.
2. Rotate the brush end caps until the indicator lines on the ends are vertical.
3. Lower the brush door and secure with spring clips.

**Debris Tray Removal**

1. Release the debris tray spring clip.
2. Slide the debris tray away from machine.

**Debris Tray Installation**

1. Slide the debris tray into the debris tray mount notch.
2. Secure with debris tray spring clip.

**Belt Replacement**

1. Remove three (3) cover screw and cover.
2. Push belt tensioner to the left as shown to release belt tension. Remove belt and discard.
3. Thread new belt through pulley’s and tensioner.
4. Re-install cover.

*NOTE: Belt must be installed with lettering facing out. If installed incorrectly this may cause excessive noise.*
CAUTION:
Do not use a pressure washer to clean around the brush motors. Use tap pressure only.

ATTENTION:
N'utilisez pas de nettoyeur haute pression pour nettoyer autour des moteurs des brosses. Utilisez seulement la pression du robinet.

Remove Brush Deck
1. Lower brush deck.
2. Turn off machine
3. Disconnect motor harness connectors and remove vacuum hose from top of deck.
4. Remove bumper bolts and bumper to access linkage mount brackets.
5. Pull down and disconnect spring mount bracket from deck lift arm. Keep spring attached to mount bracket.
6. Remove four (4) bolts and associated hardware that connect deck lift arm to linkage mount brackets on drive assembly.
7. Remove two (2) bolts and associated hardware that connect deck lift arm to lift linkage plate.
8. Pull out deck with attached deck lift arm.
9. Reverse to reassemble.

Replace Brush Deck Motor
1. Remove brush deck from machine.
2. Remove two (2) nuts to free rear mounting bracket from deck.
3. Remove six (6) motor mount bracket face screws.
4. Remove rear mounting bracket.
5. Remove motor with attached coupler, leaving front motor mounting bracket still attached to deck.
6. Remove coupler from old motor for reuse.
7. Inspect spider coupler for wear replace as needed.
Reverse process to reassemble with new motor.

Brush Motor Carbon Brush Replacement
1. Scribe alignment mark on motor barrel to motor cap. Remove two bolts.
2. Remove end cap from motor.
   NOTE: Motors contain two wave washers in cap. Do not lose these.
3. Release brush from spring tension. Remove screw connecting brush wire lead to brush holder. Clean brush holder to insure free movement.
4. Retract spring and install new brush. Install connector screw and lead.
5. When all new brushes are installed. Place all in retracted position, held into brush holder by spring tension.
6. Carefully place end cap onto bearing on motor shaft.
   NOTE: Use care to assure wave washer alignment.
7. With end cap in partially installed position, release all brushes to contact position with motor commutator.
   NOTE: Failure to insure all brushes are released will result in motor failure.
8. Reset end cap and realign with scribe marks on motor barrel. Reinstall the two attach bolts from cap into base. Maintain alignment between motor barrel base and cap.
   FOR SAFETY: before leaving or servicing machine, stop on a level surface, turn off machine and disconnect power.

Replacing Coupler Spider
1. Remove three (3) cover screws and drive housing cover from end of brush deck.
2. Remove four (4) drive housing mounting screws
3. Slide out brush drive housing assembly with attached coupler from end of brush deck extrusion.
4. Replace coupler spider.
5. Reverse to assemble.
   NOTE: Align coupler jaws when sliding in brush drive housing assembly.
To Repair or Replace Vacuum Motor

1. Remove four (4) screws from top of control panel.
2. Tip control panel back from console to expose vacuum motor wires.
3. Disconnect electrical connector from the vacuum motor.
4. Replace one screw to secure control panel to console.
5. Open console.
6. Remove the two (2) nuts from vac motor bracket, as shown below.
7. Remove three (3) screws that secure vacuum motor assembly in place. Remove vacuum motor assembly, as shown below.
8. Remove move three (3) screws that secure vacuum motor. Replace motor.
9. Reverse steps to install.

NOTE: If vacuum motor is not mounted as shown, vacuum may not seal properly, resulting in poor performance.

Vacuum Motor Carbon Brushes

If armature commutator is grooved, extremely pitted or not concentric, the motor will need to be replaced or sent to a qualified service center.

Important:
These brushes wear quicker as the length shortens due to increased heat. Spring inside brush housing will damage motor if brushes are allowed to wear away completely.

Periodically check the length of the carbon brushes. Replace both carbon brushes when either is less tan 3/8” (9.5mm) long.
Drive Motor

Drive Motor Carbon Brush Replacement

⚠️ CAUTION: ⚠️
Do not use a pressure washer to clean around the brush motors. Use tap pressure only.

⚠️ ATTENTION: ⚠️
N’utilisez pas de nettoyeur haute pression pour nettoyer autour des moteurs des brosses. Utilisez seulement la pression du robinet.

FOR SAFETY: Before leaving or servicing machine, stop on a level surface, turn off machine and remove motor carbon brushes.

1. Open the console cover.
2. Tilt the rear panel back until it stops on the lanyard.
3. Grasp the lower end of the flexible steering shaft and pull it straight up until it is disengaged with the hex steering shaft.
4. Remove the cover and gasket at the steering shaft area.
5. Grasp the drive wheel by reaching under the front bumper and turn it to near the left steering stop.
6. The drive motor carbon brushes are located under screw caps. The caps are accessible by gently moving the harness aside.
7. Rotate the drive wheel to near the right hand stop to access the right side carbon brush.
8. Replace the gasket and cover, set the drive wheel straight ahead, set the steering wheel straight ahead, and gently align the steering shaft coupling and slide onto the lower shaft.
9. Slowly close the cover and make sure the shaft slides without binding.

Drive Chain Tension

The drive chain should deflect about 1/4 inch on either side of the loop when the opposite side is tight.

To adjust chain tension:
1. Remove bumper.
2. Loosen five (5) screws that hold the drive gear motor and slide the gear motor up until the chain tension is correct. Tighten the five (5) mounting screws.
3. Models equipped with jack screw on front side of drive should not use jack screw to apply tension. Use only as a stop once chain is properly tensioned.
4. Reinstall the bumper.

Transporting Machine

This machine is equipped with a drive gear engagement/disengagement lever.

The brake automatically engages and keeps the machine from moving whenever the operator stops the machine.

The drive gear can be disengaged so the machine can be pushed or towed (slowly).

When the drive gear is disengaged the machine cannot be driven.

NOTE: Front bumper removed for clarity and to show access to lever.

Lever access

Turn wheel to left and reach up under bumper and steel bracket
**Drive gear engaged**
Machine can be driven.
Rotate lever firmly in direction of arrow

**Inclines**
When navigating an incline the machine may come to a stop. Turn the machine off. Wait 5 minutes and start the machine and proceed up the incline.

⚠️ **CAUTION:**
Overheating may occur if you do not wait the full 5 minutes.

⚠️ **ATTENTION:**
Une surchauffe peut se produire si vous n'attendez pas les 5 minutes complètes.

**Drive gear disengaged**
Machine can be pushed or towed (slowly).
When disengaged the machine rolls easily. Disengage on a level surface.
Rotate lever firmly in direction of arrow.
**Preparation for Loading/Unloading Trailer**

Before loading or unloading machine from trailer, brush deck must be in the up position.

When transporting the machine on a trailer or in a truck, in addition to using tie-downs, be sure to block the tires to prevent the machine from rolling.

**Machine Tie-Downs**

There are two tie points located in front of the rear wheels on the frame, and a Tie-down wrap point on the vacuum bag housing. Tie-down devices must be of the proper type and strength. The combined strength of all tie-downs must be strong enough to lift two times the weight of the machine. Tie-downs must be positioned to prevent the machine from moving forward, backward, or either side to side. Use all four corners of the machine with the tie-downs running out opposite directions. Tie-downs must be attached to the transporting vehicle securely.

**Recommended Tie-Down Points**

- **VACUUM BAG HOUSING**
- **CONNECT AT FRAME**
- **VIEW FROM BOTTOM**
