

HOW TO MEASURE AIR FOAM ROLLS

Non-abrasive, light weight air foam rolls are filled with thousands of cushioning air cells to protect products in shipping. The heavier the items being shipped, the thicker the foam sheeting you should use. Sold in 72" master bundles, Nassco® is able to customize and cut air foam rolls to whatever length and width you need.

When customizing air foam rolls, specify these 3 things:

- 1 **Foam Thickness**
- 2 **Roll Width Dimensions (to total 72")**
- 3 **Perforation Length Dimension**
