

HOW TO MEASURE POLY BAGS

Side Gusseted Bags

A gusset is a triangle shaped fold on either side of the bag. The gusset is considered the depth of the bag.

Example:

5" X 3" X 10"

(W) Width = 5"

(H) Length = 10"

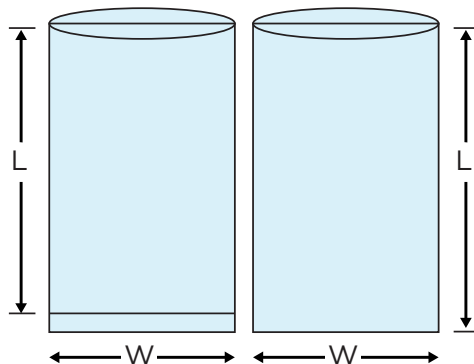

(D) Depth = $1\frac{1}{2}" \times 2 = 3"$

**All bags measured bag opening to seal*

Falt Poly Bags

Width (W) X Length (L)

Bag widths less than 18" do not include bottom tail in length measurement.
Widths 18" & over include bottom tail.

Zipper Bags

Width (W) X Length (L)

Zipper Bag measurement does not include the zipper and lip.
